

**Office of Regulatory Staff
New Nuclear Development Update Report
V.C. Summer Units 2 & 3**

During the week of February 5, 2018, Office of Regulatory Staff – New Nuclear Development personnel (NND Personnel) worked at the VC Summer site on Monday.

On Monday February 5, NND Personnel attended the Plan of the Day meeting which focused on safety, SCE&G security and demobilization/abandonment of the site. The following activities were discussed:

- Reduction of staff on-site
- The Auction Company continued to remove Westinghouse equipment off site. Completion expected at the end of next week.
- Continue to move trailers off site
- Concrete Batch Plant constituent removal

On Tuesday February 6, NND Personnel met with the SCE&G Abandonment Manager to tour the project's two off-site warehouses. NND Personnel performed a walk-down of the Blythewood warehouse which is approximately 150,000 square feet (or almost 3 football fields). It was filled with new plant equipment, mostly valves of all sizes.

Additionally, NND Personnel performed a walk-down of the Metro warehouse (W. Columbia) which is approximately 240,000 square feet (or almost 5 football fields). It was filled with new plant equipment, including generator parts, fuel handling equipment, squib valves, air handling equipment and electrical components.

The value of the equipment in both off-site warehouses is estimated to be in the hundreds of millions of dollars (ORS has requested the value of equipment from SCE&G).
